-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Locke et al or Outten et al in view of Katayama et al and Stiefel et al.

Each of Locke et al and Outten et al disclose lubricating oil compositions comprising mixtures of neutral and overbased metallic detergents. These compositions are further taught as comprising conventional additives such as friction modifiers etc. The primary references lack an explicit disclosure of the use of trinuclear molybdenum compounds and dihydrocarbyl thiocarbamoyl compounds.

The reference to Steifel et al teaches the benefits of the addition of minor amounts of trinuclear molybdenum compounds such as instantly claimed to lubricating oils.

The reference to Katayama et al teaches the benefits of the addition of dialkyl thiocarbamoyl compounds in combination with molybdenum compounds to lubricating oils.

It would have been obvious to one of ordinary skill in the art to incorporate the additives taught by the secondary references into the oils of the primary references when the benefits as taught by the secondary references were desired.
